

## ACS Upgrading to Rev A

### The Fastest Mobile Internet Available in the Nation

ACS has initiated a significant upgrade of its voice and data network. Known as "Revision A" (Rev A), the upgrade will make the ACS network the fastest available in the nation.\*

"Rev A is the next step in ACS' commitment to provide our customers with the fast wireless broadband service they have come to expect in their business," said Connie Dorman, ACS director of marketing, "As our customers' needs continue to grow, ACS' network is well-positioned to deliver higher speeds and greater capacity for years to come."

A noticeable improvement of the Rev A upgrade will be for users who participate in live webex and videoconferencing. That's because Rev A offers improved latency—the time it takes for a block of data to cross a network connection, from sender to receiver. Rev A's low latency also supports VoIP solutions such as ACS goVocal, and significantly reduces voice or video delays. With Rev A users will also notice considerably faster speeds when uploading files such as large documents, videos and pictures.

Rev A is currently available on the CDU-680 Mobile Internet Key and ACS has a number of other Rev A devices planned in the near future.

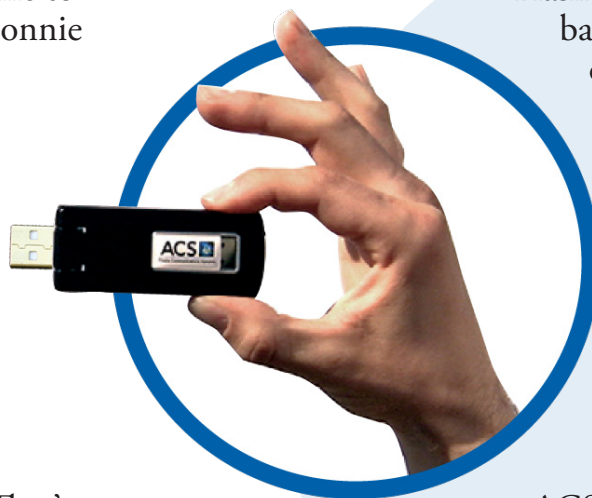

Similar to its predecessor (the CDU-650, which ACS released last April), the CDU-680 plugs into any Mac or PC USB port and allows users to surf the Internet from almost anywhere they can receive a cell phone signal. It provides internet access at true broadband speed, supports Windows 2000, XP, Vista, Mac OSX, and Linux, and features on-board

Flash memory storage, doubling as a backup file-storage or file-transfer device. It also comes loaded with installation software, eliminating the need for separate disks.

Once the Rev A upgrade is complete, 100% of ACS' EVDO coverage will be Rev A, with peaks of 3.1 Mbps downloads and 1.8 Mbps uploads.

ACS' statewide EVDO footprint covers 60% of Alaska's population, from the Southeast to the North Slope. EVDO Rev A roaming is also available in Canada, and will be available in the Lower 48 by this November.

You can find out more about ACS Mobile Internet CDU-680 by going to [acsalaska.com](http://acsalaska.com) or by contacting us at: 888.336.EVDO or [wrls.bus.sales@acsalaska.com](mailto:wrls.bus.sales@acsalaska.com).

\* Based on comparisons of ACS EVDO and 1xRTT to at&t EDGE and GPRS, respectively. Actual speeds and coverage may vary.
