

## What if your business outgrows DSL?

For small to mid-size companies that have outgrown basic DSL Internet connection, ACS has a solution: BusinessXB Broadband Internet Service.

Like DSL, BusinessXB Broadband provides a fast, consistent, dedicated line to the Internet. But it's also a full-duplex symmetrical connection, which means customers can upload and download data simultaneously—and much faster—than they can through asymmetrical cable.

And with scalable connection speeds ranging from 768 kbps to 10 Mbps, it's perfect for all types of businesses—from companies with high-volume upload traffic or in-house servers to Wi-Fi hotspots like those found in hotels and coffee shops, which support multi-tenant Internet access.

BusinessXB Broadband is fast, reliable Internet access with enhanced upload capabilities at a reasonable price. And because ACS customers pay a flat rate for

unlimited access, subscribers won't have to worry about usage fees or unwelcome billing surprises.

“For businesses that want to upgrade from a DSL connection, but don't want the higher costs associated with carrier-class Internet service, BusinessXB Broadband is ideal,” says Sheldon Fisher, ACS' senior vice president for sales and services. “It offers the best possible performance-to-cost ratio.”

ACS' BusinessXB Broadband also includes a superior support system that features circuit and health monitoring every hour of every day. For troubleshooting, enhanced support connects customers directly to system engineers, and if a problem can't be fixed over the phone, a technician will be onsite within hours.

## Get Freedom at Your Fingertips!

On May 12th, ACS launched the PPC 6800, our newest Smartphone. This slim, sleek, lightweight phone gives you the power of a desktop PC and fits in your pocket.

With a sliding QWERTY keyboard and large, landscape orienting touch screen, the 6800 is streamlined and easy to use.
